2、 Software installation and network connection

2.1 Computer-side installation management software

a,Please take out the CD in the accessory box of the machine before use.

b,Prepare a PC, and then install the operation software in CD disk. please follow up the software operation instructions.

c, Double click the operation software to finish installation.

2.2 There are two ways to connect a device to   network

Method 1: Connect the RJ45 network cable to the RJ45 network interface of the advertising display device and the other end to the network interface of the switch.
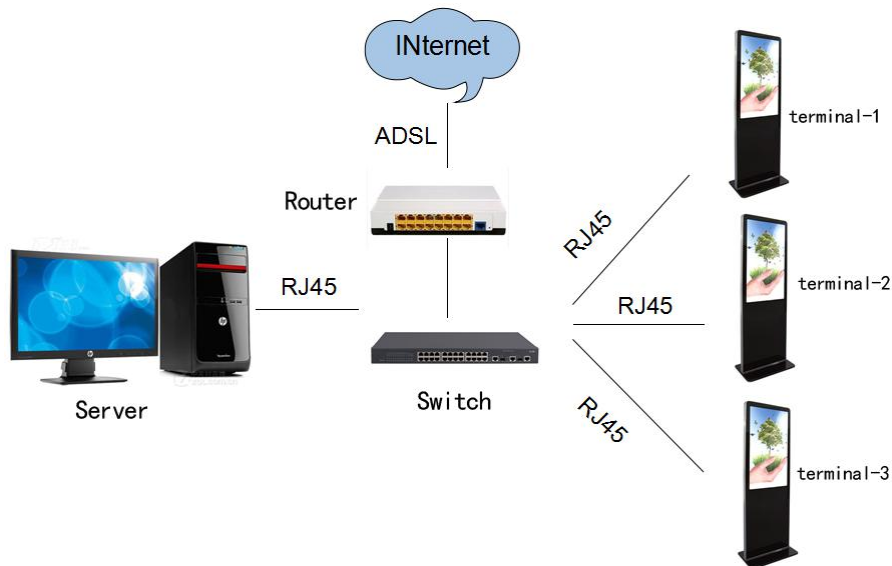

Method 2: through the wireless router connected with the advertising terminal.
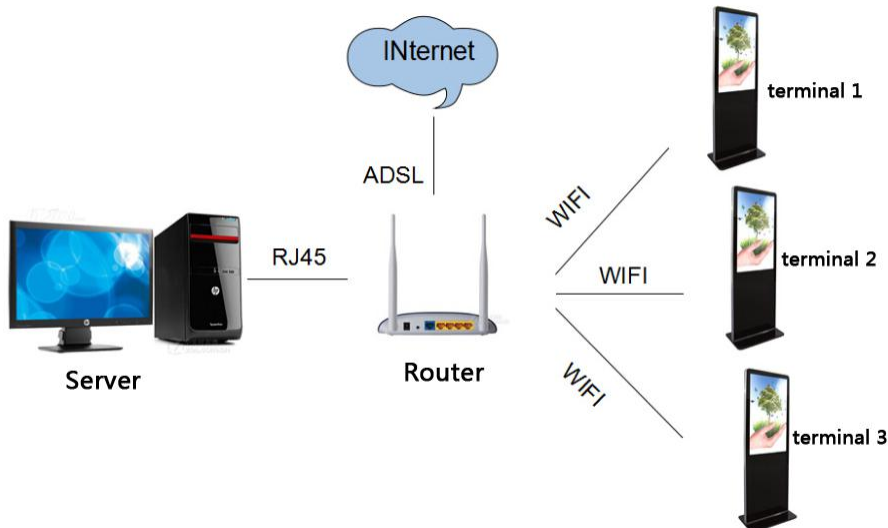

3、 Terminal operation instructions

3.1 Exit the player mode

When the power is turned on, the machine will automatically turn on and enter the player mode as shown in below figure. Connect the USB mouse and click the "wheel" in the middle of the mouse, pop-up setting and exit menu on screen bottom menu. Click the exit button to exit the player mode.

3.2 Set up network connection

There are 3 ways to set up network connection (Wired is recommended)

Mode 1：wired connection,

Plug one end of the RJ45 cable into the player's wired network jack and the other end into the network switch's network jack. The machine automatically recognizes the network and obtains the corresponding IP address.

Mode 2: wifi connection

Click the "Settings" button at the bottom of the system page - "System Settings -" wifi, click to open the wifi switch, on the right side come out wifi wireless network link point. Click the desired connected network and input password, then wireless network is connected.
Mode 3: 3G / 4G network connection

Click the "Apply" button on the lower left corner of the system home page to enter the application interface, click "Settings" - "More -" Internal 3G - "Use the internal 3G / 4G, click √ behind 3G / 4G ,then 3G/ 4G network is on connection status.
Note: The machine must be turn off or power off before insert 3G / 4G network card , and then reboot the machine to ensure 3G / 4G Internet network function is normal.

3.3 Adjust the machine display range

Click the Apply button on the lower left corner of the system's home page to enter the application interface. Click the "Settings" - "Display -" cut screen edges, and adjust the displayed area by dragging the scroll bar in the pop-up menu.
3. 4 Enter the player mode

Click on the system home page on the lower left corner of the application button, enter the application interface, click the XdsClient player icon to enter the player mode, it takes 10 seconds to enter the player mode .
3.5,Set the server address and player name

In the player mode, click the "wheel" in middle of mouse pop-up settings interface, click "server", pop-up settings dialog box, input the server IP address or domain name , click OK.
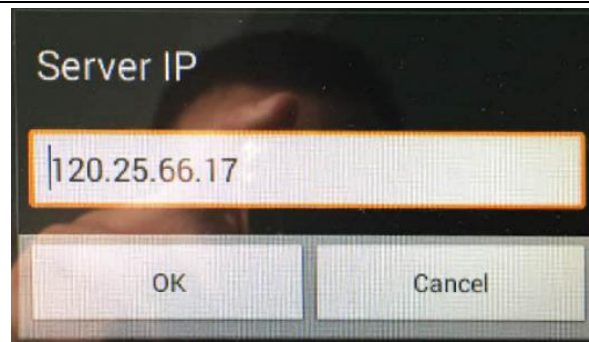

4、Software Operation

4.1 System login

Please read software operation user manual for detailed software operation and program edit.

After finishing installation, double-click the icon on the desktop [XDS Management], start the management side, enter the user name and password, click Settings to modify the server address, as shown below settings.

●The initial user name and password are admin.

●The default server IP is127.0.0.1. Which should be modified to the actual IP address，the port is 5001.

☆When the management side and the server is not installed on the same computer, the server IP column fill in

the current server's IP address. When the server is deployed in the WAN here to fill in the WAN IP address, when the server is deployed in the LAN, then fill in the LAN IP address.

Click 【Login】 to enter the main management interface, as shown below.
4.2 Exit system

Click the close button in the upper right corner ,click "confirm" to exit the system, or click the close button of the dialog to exit the system. As shown below .
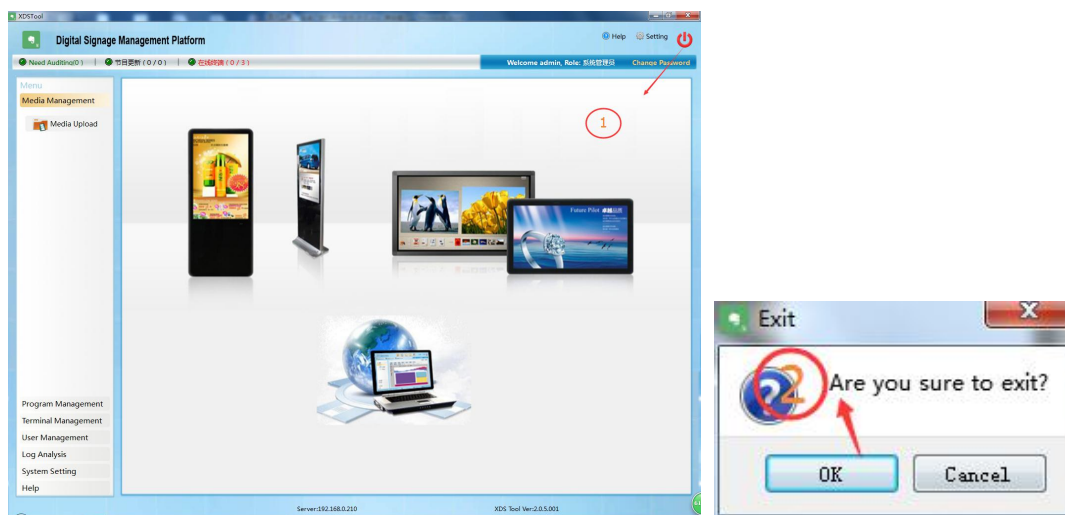

5、 Common Troubles and Handling Methods of Network Advertising Player

num	Failure phenomenon	Troubleshooting
1	The terminal is offline	1. Check whether the terminal network is properly connected. 2. Check that the server IP address settings is correct 3. Check if the firewall of the server computer's is turned off 4. "Ping" the terminal IP in server, whether it is normal. 5. Check whether the terminal port number is 5101 6. Network is normal, but can not always see the terminal, then restart the switcher and router between terminal and server. If problem remain the same after above troubleshooting,you need to check if the client network management TCP and UPD protocol is open. (you can also check the network environment, the server is arranged in the first layer switch or the core switch)
2	The server connection is unsuccessful	1. Check if the server's XDSServer service is started; 2. Check if IP, port number, user name and password under the management setting is correct. 3. Check the server network under the management end to is normal, you can use Ping command test; 4. Check the firewall of the server opens port 5001,21 and 80 ;
3	The program does not play.	First "restore the default settings" and then "clear the material" and then re-send the program.
4	can send programs In the server, fail to send if change a computer.	Check the time between the computer and the server is same.
5	Bulk send program says "operation failed"	Delect the installation directory, reinstall the server, database, most important is to increase the bandwidth.
6	Use USB disk to import the edited program, screen becomes black	The server is the latest version, import edit the program leads to terminal blank screen. Reload server, edit program and use USB disk to import Program .
